CHICAGO CLEAN POWER COALITION

Dear Mayor Emanuel:

Coal is destroying our communities in Chicago. Edison International's Fisk and Crawford coal plants are making us sick and fueling climate change. The power from these plants is sold out of state, the profits go to California-based Edison, while families in Chicago get stuck with the pollution, the hospital bills, and the costs of an increasingly unstable climate.

Meanwhile, state and federal regulations have failed to protect us against asthma-causing soot and global warming pollution.

As a resident of Chicago, I ask you to hold Edison accountable to phase out these coal plants, protect workers and create a safe and renewable energy future. Until then, I ask you to protect public health by setting strict pollution limits of at least 50% reduction in CO_2 pollution and 90% reduction in soot pollution for the Fisk and Crawford coal plants.
